Mailpieces are classified by shape and by the way they are prepared. These classifications are based on how efficiently mailpieces can be processed on Postal Service equipment. The Postal Service classifies letters and cards into one of three categories: machinable, nonmachinable, and automation. For the purposes of determining mailability or machinability, the length is the dimension parallel to the address as read (601.1.1.2).

**Machinable Letters and Cards** *(201.1.0)*

If you prepare your letters and cards so that they have an accurate address and can be processed on Postal Service equipment, your mail is “machinable” and eligible for “presort” prices. Machinable mailpieces must meet specific standards, including size, shape, and weight.

- **Maximum weight:** First-Class Mail, machinable letters and USPS Marketing Mail machinable letters: 3.5 ounces; Periodicals letters: 3.5 ounces.

Machinable letters must not meet any of the nonmachinable characteristics *(201.2.0)*.

**Nonmachinable Letters** *(201.2.0)*

Maximum weight: First-Class Mail and Periodicals nonmachinable letters 3.5 ounces; USPS Marketing Mail nonmachinable letters; less than 16 ounces.

Presorted First-Class Mail letters are subject to a nonmachinable surcharge if they meet any of the characteristics in 201.2.1. The nonmachinable characteristics do not apply to pieces mailed at card prices.

USPS Marketing Mail letters that have one or more of the nonmachinable characteristics in 201.2.1 are subject to the nonmachinable letter prices in 243.1.3.

Examples of a nonmachinable letter include:

- It has an aspect ratio (length divided by height) of less than 1.3 or more than 2.5 (a square envelope has an aspect ratio of 1, making it nonmachinable).
- It is more than 4-1/4 inches high or more than 6 inches long and is less than 0.009 inch thick.
- It has clasps, strings, buttons, or similar closure devices.
- It is too rigid.
- It has a delivery address parallel to the shorter side of the mailpiece.
- It contains items such as pens, pencils, or keys that create an uneven thickness.

Letters with nonpaper surfaces, other than envelope windows or attachments that are allowed under eligibility standards by class of mail.

If your letter-size mailpiece is machinable and displays the correct delivery point barcode or Intelligent Mail barcode, you may qualify for lower, “automation” prices. A letter or card meets automation standards and qualifies for automation prices if it meets the specific addressing, barcoding, and design standards.

For additional information, see:
- Quick Service Guide 201a, Designing Letters and Cards for Automated Processing.
- Quick Service Guide 201b, Using Tabs, Wafer Seals, and Glue Strips.

Maximum weight:
- First-Class Mail automation letters: 3.5 ounces.
- Periodicals automation letters: 3.5 ounces.
- USPS Marketing Mail automation letters and carrier route letters: 3.5 ounces.
- See 201.3.6 for heavy letter mail weighing over 3 ounces.

Shape: rectangular. Aspect ratio (length divided by height): 1.3 to 2.5 (201.3.7).

Dimensions:
- Minimum: 5 inches long, 3-1/2 inches high, and 0.007 inch thick. For letter-size pieces 0.009 inch thick if more than 4-1/4 inches high or 6 inches long, or both.
- Maximum for First-Class Mail card prices: 4-1/4 inches high, 6 inches long, and 0.016 inch thick.
- Maximum for letters and other cards: 6-1/8 inches high, 11-1/2 inches long, and 1/4 inch thick.

Length is the dimension parallel to the address as read (601.1.1.2).

All letter-size reply cards and envelopes (Business Reply Mail, Courtesy Reply Mail, and meter reply mail) provided as enclosures must meet the physical standards for automation letters and cards in 201.3.17.
