Matter mailed in USPS-produced Priority Mail Express packaging is subject to Priority Mail Express prices regardless of how the packaging is reconfigured or how markings may be obliterated. Priority Mail Express envelopes and boxes are available from local Post Offices or online at www.usps.com at no additional cost. Customized preprinted labels also are available by contacting the local Post Office.

For each Priority Mail Express item, the mailer has the option to present the item at a Post Office location and have a shipping label printed and affixed, use a Self-Service Kiosk (SSK) (where available), or should choose one of the available payment/shipping methods (Manual offices will continue to use Label 11-M.). Each piece should include a complete delivery and return address with the correct ZIP Code or ZIP+4 code.

Signature required (for labels dated January 2012): Mailers requiring a signature must instruct USPS by checking the "Signature Required" box on the label. A signature is required for Priority Mail Express COD, or Priority Mail Express with additional insurance.

Determining Priority Mail Express Dimensional Weight**Priority Mail Express dimensional weight for rectangular shaped parcels to zones 1–9.**

1. Measure the length, width, and height in inches. Round off¹ each measurement to the nearest whole inch: (length = 21, height = 20, and width = 20).
2. Multiply length by height and then that total by width: (21 x 20 x 20 = 8,400 cubic inches).
3. If the final result exceeds 1,728 cubic inches, divide the result by 166 and round up² to the next whole number to determine dimensional weight in pounds: (8,400/166 = 50.60. 50.60 rounded up to the next pound is 51).
4. The price is based on the actual weight or dimensional weight, whichever is greater.

In this example the dimensional weight for this rectangular package to zones 1–9 is 51 pounds.

**Priority Mail Express dimensional weight for nonrectangular shaped parcels to zones 1–9.**

1. Measure the length, width, and height in inches at their extreme dimensions. Round off¹ each measurement to the nearest whole inch: (length = 30, height = 9, and width = 18).
 2. Multiply length by height and then that total by width: (30 x 9 x 18 = 4,860 cubic inches).
 3. Multiply the result by an adjustment factor of 0.785: (4,860 x 0.785 = 3,815.1 cubic inches).
 4. If the final result exceeds 1,728 cubic inches, divide the result by 166 and round up² to the next whole number to determine the dimensional weight in pounds: (3,815.1/166 = 22.98. 22.98 rounded up to the next pound is 23).
 5. The price is based on the actual weight or dimensional weight, whichever is greater.
 6. If the dimensional weight exceeds 70 pounds, the customer pays the 70-pound price.
- In this example the dimensional weight for this nonrectangular package to zones 1–9 is 23 pounds.

**Additional examples of nonrectangular measurement.**

1. Round off. (e.g., 20.5 rounded off to the next whole number is 21, and 20.4 rounded off is 20.) See [604.7.1.3](#)
2. Round up. (e.g., Rounding up either 44.2 or 44.8 to the next whole pound is 45.)
