Web Service Software Development Kit Overview
This software development kit (SDK) is intended to provide software and Internet developers with the ability to integrate postage rate information into programs and/or web sites.

Licenses and Liability
The information and components contained within this SDK may be distributed only to individuals who have signed the USPS User License and may only be used in accordance with the terms of the USPS User License. The USPS assumes no liability for the incorrect implementation of this SDK once it has been incorporated into a client product. The USPS will supply upgrades to the data and/or the objects when needed, but it assumes no part in distribution of these upgrades once the engine has been integrated into client products.

Purpose
This document will explain the Domestic and International Pricing EngineWC3 Web Service Interface.

Contact Information

For Technical Support, contact:
Email: RCalcPEPMOSupport@usps.gov

For USPS Support, contact USPS:
Email: PostalExplorer@usps.com
Application Programming Interface (API)

Overview
The Pricing Engine is built using the Model, View, Controller (MVC) design pattern and should be used as a black box. All of the Pricing Engine behavior is provide by making calls to methods that are part of a two interface classes named PostOfficeServices and PricingServices.

Working IDs
The Pricing Engine does not enumerate the ID. This was done to allow for greater flexibility. As new services are added the ID of that service only needs to be known to the service itself. The user of the Pricing Engine should not hard code any IDs into their application because services and IDs may change over time. To get the ID of a service, the developer should request the services by specifying to know mail properties and then use the ID of the desired service from the results returned.

Domestic Pricing Engine Interface
The following operations are defined for the Domestic Pricing Engine. See “Pricing Engine Design Model.pdf” for details.

PostOfficeServices Class

GetLocations Method

Description
This method is used to get locations by specifying a list of ZIP Codes. The similar method with the forDate input parameter changes the behavior to produce results available as of the date specified.

Syntax
GetLocations(in zipCodes : ZipCode[]) : Location[]

GetLocations(in zipCodes : ZipCodeCollection, in forDate : DateTime) : Location[]

GetMailingRestrictions Method

Description
This method is used to get the mailing restrictions for a specified ZIP Code or collection of ZIP Codes. The similar method with the forDate input parameter changes the behavior to produce results available as of the date specified.

Syntax
GetMailingRestrictions(in zipCodes : ZipCode[]) : MailingRestriction[]

GetMailingRestrictions(in zipcodes : ZipCodeCollection, in forDate : DateTime) : MailingRestriction[]
**GetZone Method**

**Description**
The method is used to get the zone information between origination and destination ZIP codes. The similar method with the forDate input parameter changes the behavior to produce results available as of the date specified.

**Syntax**
GetZone(in originZIPCode : ZipCode, in destinationZIPCode: ZipCode) : Zone

GetZone(in originZIPCode : ZipCode, in destinationZIPCode: ZipCode, in forDate : DateTime) : Zone

**GetZones Method**

**Description**
The method is used to get the zone information for a 3-digit ZIP Code. When the ZIP Code collection contains more than a single 3-digit ZIP Code, zone information is returned to each ZIP Code passed. The similar method with the forDate input parameter changes the behavior to produce results available as of the date specified.

**Syntax**
GetZones(in zipCodes : ZipCode[]) : Zone[]

GetZones(in zipCodes : ZipCodeCollection, in forDate : DateTime) : Zone[]

---

**PricingServices Class**

**CalculateServicePrice Method**

**Description**
This method is used to calculate the total cost of a selected mail service and any selected extra services.

**Syntax**
CalculateServicePrice(in request : WSCalculationRequest) : CalculatedPricing

**GetExtraServicesWithPricing Method**

**Description**
This method is used to get a specified list of extra service with the price of each.

**Syntax**
GetExtraServicesWithPricing(in extraServicesRequest: WSEnterpriseServicesRequest) : ExtraServicesWithPricing
**GetServiceCommitments Method**

**Description**
This method is used to get the mailing service commitments for the specified request. The caller is required to specify the following:
- Origin ZIP Code
- Destination ZIP Code
- Shipping date/time
- Mail shape and size

**Syntax**
GetServiceCommitments(in servicesRequest : WSServicesRequest) : ServiceCommitment[

**GetServiceWithPricing Method**

**Description**
This method is used to get a list of mailing services with associated extra services for the specified mail piece attributes.

**Syntax**
GetServiceWithPricing(in request : ServiceRequest) : ServiceWithPricing

**GetMailingFees Method**

**Description**
The method is used to get the Mailing Fee for a specified key.

**Syntax**
GetMailingFees(in mailingFeeRequest : MailingFeeRequest) : MailingFee

**Validate Method**

**Description**
This method is used to validate the specified mail properties. The method will return origin and destination location objects.

**Syntax**
Validate(in servicesRequest : WSServicesRequest) : Location[]

---

International Pricing Engine Interface
The following operations are defined for the International Pricing Engine. See “Pricing Engine Design Model.pdf” for details.

PostOfficeServices Class

GetCountries Method

Description
This method is used to get the collection of countries.

Syntax
GetCountries() : Country[]

GetCountriesForDate Method

Description
This method is used to get the collection of countries as of the “forDate”.

Syntax
GetCountries(in forDate : DateTime) : Country[]

GetCountryInformation Method

Description
This method is used to get the Country Information for a specific country. This includes the country price group, prices and other guideline.

Syntax
GetCountryInformation(in country : Country, in calculatorID : CalculatorID) : CountryInformation

GetCountryInformationForDate Method

Description
This method is used to get the Country Information for a specific country as of the “forDate”. This includes the country price group, prices and other guideline.

Syntax
GetCountryInformationForDate(in country : Country, in shippingDate : DateTime) : CountryInformation

GetCountryRegulations Method

Description
This method is used to get the collection of Regulations for a specific country.

Syntax
GetCountryRegulations(in country : Country) : CountryRegulation[]
**GetCountryRegulationsForDate Method**

Description
This method is used to get the collection of Regulations for a specific country as of the “forDate”.

Syntax
GetCountryRegulationsForDate(in country : Country, in forDate : Datetime) : CountryRegulation[]

**ValidateCountry Method**

Description
This method is used to discover if a specified country is valid.

Syntax
ValidateCountry(in countryID : CountryID) : void

**ValidateCountryForDate Method**

Description
This method is used to discover if a specified country is valid as of the “forDate”.

Syntax
ValidateCountryForDate(in countryID : CountryID, in forDate : DateTime) : void

---

**PricingServices Class**

**CalculateServicePrice Method**

Description
This method is used to calculate the total cost of a selected mail service and any selected extra services.

Syntax
CalculateServicePrice(in request : WSCalculationRequest) : CalculatedPricing

**GetExtraServicesWithPricing Method**

Description
This method is used to get a specified list of extra service with the price of each.

Syntax
GetExtraServicesWithPricing (in extraServicesRequest : WSExtraServicesRequest) : ExtraServicesWithPricing
**GetServicesWithPricing Method**

**Description**
This method is used to get a list of mailing services with associated extra services for the specified mail piece attributes.

**Syntax**
GetServicesWithPricing(in servicesRequest : WSServicesRequest) : ServicesWithPricing

**GetMailingFees Method**

**Description**
The method is used to get the Mailing Fee for a specified key. The Mailing Fee Request can contain a list of keys or a single key path with dots “.” delimiters. If the full key path is not specified the result will be in the form of a tree with the end of each branch containing the price, cost, value key, and value limits. If the QueryValue is specified the results will be filtered using the value limits. If the value key of all the result mailing fee matches, the value is applied to calculate the Cost.

**Request Key Example:**
internationalBusinessReply.Card

or

internationalBusinessReply.Card

**Query Value Example:**
Request:
  QueryValue = 10
  FeeKey = “internationalBusinessReply.Card”

Results:
  Price = 0.13
  Cost = 1.30

**Syntax**
GetMailingFees(in mailingFeeRequest : MailingFeeRequest) : MailingFee

**Validate Method**

**Description**
This method is used to validate the specified mail properties.

**Syntax**
Validate(servicesRequest : WSServicesRequest) : void
**CalculatedPricing Class**
